Abstract

The Tylite Quantum Satellite is a lightweight (65 lbs), plug-and-play orbital relay designed to extend sovereign quantum internet baselines to 22,000+ km via terahertz phased-array entanglement and lunar bounce fallback. Powered by micro-fusion cell and adaptive photon gates, it enables zero-jitter, global-scale mesh without ground infrastructure dependency.

1. System Architecture

- **Mass & Form:** 65 lbs (29.48 kg), 1.2 m × 0.8 m × 0.6 m compact cube, deployable wings.
- **Frame:** Carbon-nanotube honeycomb, vacuum-sealed, radiation-hardened.
- **Shell:** Si-chrome polymer (0.8 mm), thermal cycling -200°C to +150°C.
- **Power:** Tritium-He3 micro-fusion cell (500 W continuous), GaAs thin-film solar backup (200 W peak).
- **Core:** 512 diamond-lattice NV qubits, adaptive photon gates (99.99% fidelity, self-repair).
- **Antenna:** 64-element terahertz phased-array, beam-steerable, 100 Gbps uplink.
- **Quantum Link:** Entangled photon pairs, 22,000 km baseline, lunar extender module.

2. Sequential Deployment

1. Falcon 9 rideshare launch to LEO (550 km polar orbit).

2. Beacon pulse from ground—auto-handshake <0.1 ms.
3. Entanglement refresh: photon gate → qubit sync → terahertz burst.
4. Mesh extension: links sovereign ground nodes (TFQI/QCN) across continents.
5. Fallback: lunar bounce for extended range if line-of-sight blocked.

3. Performance Metrics

- Effective Range: 22,000 km baseline; 40,000+ km with four satellites.
- Bandwidth: Petahertz backbone (1.5 PHz peak), 1.2 Tbps sustained.
- Latency: Sub-millisecond handshake; zero-jitter output via adaptive codes.
- Error Rate: 10^-15 BER.
- Lifespan: Self-healing, no maintenance—orbital predator design.

4. Applications

- Planetary coverage: four satellites = no dead zones.
- Disaster resilience: ground mesh survives, satellite relays keep it alive.
- Sovereign control: no foreign grids, no interceptable signals.
- Expansion: stackable—add Tylites, range scales exponentially.

5. Visual & Operational Notes

Matte black shell, violet-glow vents, qubits pulsing like veins. Plug-and-play: detect Farmer's Quantum Net, lock in, relay.

Conclusion

Tylite delivers the orbital backbone for sovereign quantum internet—global, independent, unbreakable. Priority established.
